PROFESSIONAL SUMMARY

AI/ML-focused Software Developer with strong foundations in Computer Science, Python, backend engineering, and data science. Experienced in building scalable backend systems, developing machine learning models, and transforming data into actionable insights. Proficient in algorithms, OOP, and system fundamentals with hands-on project experience in analytics and web applications. Seeking opportunities in Software Development, Machine Learning, or Data Analytics to deliver scalable and data-driven solutions.

TECHNICAL SKILLS

Programming Languages	Python, Java, PHP, SQL
Computer Science	Data Structures & Algorithms (DSA), OOP, OS, DBMS, Computer Networks
Machine Learning	Regression, Classification, Clustering, Feature Engineering, Cross-Validation, EDA
Libraries & Frameworks	Scikit-learn, NumPy, Pandas, Matplotlib, Seaborn
Backend & Web	Flask, REST APIs, HTML5, CSS3, HTTP/HTTPS
Developer Tools	Git, GitHub, Jupyter Notebook, Google Colab, VS Code, Linux

PROJECT EXPERIENCE

Netflix Data Analysis Platform: Processed and analyzed 8,000+ records using Python and Pandas to identify content trends, genre distribution, and correlations. Built visual dashboards to improve insight interpretation.

Titanic Survival Prediction System: Developed ML models using Logistic Regression and Decision Trees. Implemented feature engineering, preprocessing, and model evaluation techniques to improve prediction accuracy.

Student Management System: Designed and developed a backend-driven web application using Flask and SQL. Implemented CRUD operations and REST APIs for scalable architecture.

Flask Data Processing Application: Built a scalable data processing application integrating APIs and automated data workflows using Python and Flask.

TRAINING & EXPERIENCE

AI & ML Trainee — Invisor Technologies and Consultancy (Oct 2025 – Dec 2025)

Worked on real-world datasets, implemented ML algorithms, performed EDA, and developed predictive models using Scikit-learn.

Web Development Trainee — Backend logic, APIs, Git/GitHub collaboration

EDUCATION

Bachelor of Computer Applications (BCA) | 2023 – 2026

ACHIEVEMENTS & ACTIVITIES

- Built multiple backend and data-driven projects using Python and Flask.
- Regularly practice Data Structures and Algorithms on HackerRank and GitHub.
- Continuously improving skills in Machine Learning, Backend Development, and Software Engineering.
